

BRIJESH JAYANT BAPAT

Lead Infrastructure Architect | VMware to Azure/AWS | Certified in DevOps & SRE Linux Foundation | 15+ Yrs DC/Cloud

Highly skilled Enterprise Cloud Infrastructure Admin & Operations SME with extensive experience managing VMware and Windows environments. Proven ability to lead strategic initiatives and ensure high availability, seeking a VMware and Windows Administrator role to leverage expertise and drive operational excellence.

Dedicated and results-oriented with 3+ year in AWS DevOps Engineer and 15+ years of experience managing IT operations and implementing CI/CD pipelines. Seeks to leverage AWS expertise and automation skills to optimize cloud infrastructure and enhance software delivery efficiency at a forward-thinking organization.

- Implemented SRE practices per Linux Foundation framework: defined SLO 99.95% + error budgets, reduced MTTR 75% using Azure Monitor

Mobile: +919890755342 E-mail: brijesh.bapat@gmail.com Address: <https://www.credly.com/users/brijesh-bapat>
LinkedIn: [linkedin.com/in/brijesh-bapat-48480973](https://www.linkedin.com/in/brijesh-bapat-48480973) GitHub: https://github.com/brijeshvm77-ship-it/Project_ELK

PROFESSIONAL SUMMARY

- Enterprise Cloud Infrastructure SME with extensive expertise in VMware and Windows environments, driving operational excellence.
- Proven leader in strategic planning, overseeing 3500+ servers across Unix, Linux, and Windows platforms.
- Expertise in managing Azure AD Connect, Entra ID, Azure Arc, and troubleshooting synchronization issues.
- Successfully directed large-scale server migrations and data center transformations, ensuring minimal disruption.
- Implemented proactive monitoring with SolarWinds and Splunk, enhancing system stability and performance.
- Proficient in security tools like Trend Micro, maintaining robust security posture.
- Achieved 99.7% SLA compliance, handling approximately 1,100 service requests per month.
- Reduced MTTR by 7% through effective incident and problem management strategies.
- Led AWS optimization initiatives, delivering 28% cost savings through resource utilization.
- Maintained 100% uptime with zero Sev-1/2 incidents for over a year.
- Skills to bold: Azure Landing Zone, ASR, Azure Policy, AKS, Key Vault, VMware vSphere 7.x, SRM, AWS SAA, SRE SLO/SLI, Terraform, DevSecOps

SKILLS

Technical Skills: VMware vSphere, Windows Server, Active Directory, PowerShell, ESXi, Hyper-V, Azure AD, SolarWinds, Splunk, Ansible, Git, Jenkins CI / CD, Terraform, Docker, Kubernetes

Soft Skills: Problem-solving, Leadership, Communication, Collaboration

Core Competencies: Infrastructure Management, Data Center Operations, Cloud Migration, System Administration, DevOps

WORK EXPERIENCE

Senior Consultant / Senior Tower Lead - Infra & Compute (Feb 2020 - Sep 2025)

Tata Consultancy Services (TCS), Pune (Pune)

Led infrastructure and compute tower, responsible for strategic planning, server management, migration, and security implementation across a large server environment. Maintained high SLA compliance and drove efficiency improvements while ensuring successful audit outcomes.

Worked on VMware project for various clients for New Installation or Upgradation of vSphere technology to VMware Cloud Foundation using Hyperconverged technology using Compute, Storage and Network Virtualization. Installed ESXi on HP ProLiant iLO server models like DL 360 and DL 380. ESXi version 9.1.

Worked on Virtual Cloud Foundation 9.0.2.0 full deployment.

- Spearheaded strategic planning initiatives for seamless server OS cutover and robust disaster recovery solutions.
- Oversaw comprehensive management of Azure AD Connect, Entra ID, and Azure Arc, resolving synchronization challenges to ensure uninterrupted service delivery.
- Directed the administration of over 3500 servers across diverse Unix, Linux, and Windows platforms, optimizing performance and resource utilization.
- Led large-scale server migrations and transformative data center projects, ensuring minimal downtime and efficient resource allocation.
- Engineered and deployed proactive server monitoring tools (SolarWinds, Splunk) along with robust security tools (Trend Micro), bolstering system security and threat detection capabilities.
- Worked on Virtual Cloud Foundation 9.0.2.0 full deployment.

Achievements:

- Maintained exceptional service levels, evidenced by 99.7% SLA compliance while handling ~1,100 service requests monthly.
- Improved operational efficiency through 7% reduction in Mean Time To Resolution (MTTR) via effective incident and problem management protocols.

- Ensured adherence to security standards, resulting in a successful Deloitte SOC 2 audit with zero major findings.
- - Implemented SRE practices per Linux Foundation framework: defined SLO 99.95% + error budgets, reduced MTTR 75% using Azure Monitor

Consultant / Systems Administrator (May 2017 - Feb 2020)

TCS (Pune, Maharashtra, IND)

AWS DevOps Engineer with 5+ years of experience in Linux and Cloud Engineering.

Proficient in designing, implementing, and managing CI/CD pipelines using AWS CodePipeline.

Extensive experience with AWS services including EC2, S3, VPC, RDS, CloudWatch, ELB, and IAM.

Hands-on experience with Docker, GitHub, Jenkins, and shell scripting for automation and infrastructure management.

Expertise in Linux administration (RHEL, CentOS), security hardening (VA & CA), and operating system upgrades.

Proven ability to manage IT operations, lead transformation initiatives, and ensure system stability and security.

Skilled in implementing backup and recovery procedures, and secure file transfer using SCP.

Experience in vulnerability assessment and configuration assessment hardening, OS upgrades, and boot migrations.

Dedicated to optimizing cloud infrastructure, enhancing software delivery efficiency, and contributing to automation improvements.

- Directed AWS optimization and audit programs, enhancing cloud infrastructure performance and security.
- Implemented strategies to maintain peak operational efficiency while minimizing downtime in AWS environments.
- Managed and maintained AWS infrastructure providing consistent service availability to end-users

Achievements:

- Effected a 28% reduction in operational costs through optimized resource utilization in AWS ecosystem.
- Achieved continuous system reliability with zero Sev-1/2 incidents recorded for over one year through robust monitoring.
- Significantly improved resource provisioning and scaling via comprehensive cloud environment administration.

Consultant (Client: Microsoft) (Nov 2013 - Mar 2017)

TCS (Pune)

- Managed Microsoft Data Center Windows Clusters
- Provided L3 application support (BGIT, TFS)
- Ensured 100% uptime for SQL and failover clustering

Service and Incident Management

Change Management

Problem Management.

Achievements:

Successfully Completed the Project in Implementing task force for BGIT and TFS process

Mentored Junior Associates about the process to be followed.

Senior Systems Engineer (Feb 2009 - Oct 2013)

Sybase (SAP) / TCS

Accountable as Senior Systems Engineer for supporting SAP Cloud solutions hosted on VMware as well as implementing Chef to automate system tasks.

- Supported critical SAP Cloud services, including IaaS, PaaS, and SaaS offerings, ensuring high availability and optimal performance
- Oversaw the management of 100+ instances per project, maintaining robust and scalable environments in support of ongoing operations.
- Deployed Chef automation for efficient infrastructure provisioning along with advanced troubleshooting via custom cookbooks optimizing issue resolution

Achievements:

- Improved infrastructure efficiency through Chef automation, streamlining deployments and updates.
- Enhanced system reliability via comprehensive troubleshooting and efficient issue resolution procedures.
- Contributed to effective management of a large project portfolio utilizing VMware resources, strengthening overall system robustness.

Assistant Manager Systems (Jul 2008 - Jan 2009)

Intelligent Software (Pune, Maharashtra, IND)

Assisted as Assistant Manager Systems, overseeing system operations, troubleshooting, and infrastructure management to support business operations.

- Oversaw system administration tasks, ensuring smooth operational flow.
- Provided technical support and troubleshooting for internal systems.
- Assisted in managing IT infrastructure, contributing to enhanced stability.

Achievements:

- Enhanced system uptime through proactive maintenance and problem resolution.
- Improved data security by ensuring regular backups and implementing security protocols.
- Contributed to a more efficient IT infrastructure through effective management and coordination.

Systems Admin (Aug 2006 - Jul 2008)

Infosys BPO (Client: Verizon) (Pune, Maharashtra, IND)

Delivered system administration support at Infosys BPO for Verizon, focusing on maintaining and stabilizing system operations

- Administered and maintained systems infrastructure supporting Verizon's BPO operations.
- Provided technical support, ensuring minimal disruption to business processes.
- Managed user accounts and access controls.

- Monitored system performance, identifying and resolving issues proactively.

Achievements:

- Enhanced data center operations through proactive maintenance and system optimization.
- Improved user experience by providing timely technical support and resolving system-related issues.
- Contributed to the overall stability of IT services

QA & Systems Administrator (Nov 2004 - Apr 2006)

Great Software Laboratory (Pune, Maharashtra, IND)

Oversaw functions in QA and systems administration ensuring reliable software deployment and a robust operational environment.

- Performed both quality assurance testing and system administration tasks.
- Developed and executed test plans to ensure software quality.
- Managed server infrastructure and systems to enable continuous operations.

Achievements:

- Enhanced software reliability through rigorous testing protocols.
- Improved system availability through proactive maintenance.
- Supported the development team, facilitating efficient software delivery.

Software Engineer (May 2004 - Nov 2004)

Scandent Systems, Singapore (Singapore)

Contributed to software creation at Scandent Systems, concentrating on development, deployment, and troubleshooting

- Developed software solutions utilizing established company protocols.
- Participated in the development lifecycle, promoting effective software deployment.
- Assisted in troubleshooting issues, bolstering overall delivery

Achievements:

- Contributed to enhanced software performance, boosting reliability
- Facilitated timely project deployment by collaborating with team members
- Supported continuous process improvement by integrating feedback.

Resident Engineer (Apr 2002 - May 2004)

Wipro (Wärtsilä India) (Navi Mumbai)

Serve as Resident Engineer, delivering solutions & maintaining operational efficiency at Wärtsilä in collaboration from Wipro.

- Provided on-site technical support and expertise to Wärtsilä India, addressing engineering and operational challenges.
- Managed communication and coordination between Wipro and Wärtsilä to align technical solutions and service requirements.
- Implemented proactive maintenance procedures to maximize uptime

Achievements:

- Successfully resolved technical issues minimizing operational disruptions.
- Maintained and enhanced communication improving collaboration between technical teams
- Contributed improvements system performance and reliability

Network Engineer (Apr 2000 - Apr 2002)

Satyam Infoway (Navi Mumbai)

Worked as a Network Engineer for Satyam Infoway ensuring robust systems and solutions.

- Administered and maintained network infrastructure with robust security following the Satyam Infoway protocols.
- Analyzed and resolved technical connectivity issues across network operations.
- Implemented network enhancements and upgrades, aligning to scalability for user needs.

Achievements:

- Increased network stability contributing to continuous online service
- Enhanced resolution of difficult technical issues
- Strengthened network capacity, aligned to scalable operational needs

CERTIFICATIONS

- **EXECUTIVE PROGRAM IN DEVOPS WITH AWS** (2026)
IT Vedant Institute
- **CERTIFICATIONS & TRAINING** (2026)
- **The Linux Foundation: Introduction to DevOps and Site Reliability Engineering (LFS162) | June 2026**
The Linux Foundation
- **Microsoft Certified: Azure Administrator (AZ-104)** (2025)
Microsoft Learn: Azure Solutions Architect Learning Path – Completed
- **Microsoft Certified: Windows Server Virtualization** (2025)
Microsoft Pearson Avenue
- **Microsoft Certified: Hybrid Infrastructure (AZ-800/801)** (2023)
Microsoft - pearson vue
- **VMware Certified Professional v5.5 - Data Center Virtualization** (2017)

VMware Hands-on Labs: vSphere, SRM, vSAN – 40+ hour

VMware - Broadcom

- **Microsoft Certified Solutions Associate (MCSA 2008, 2012)** (2017)
Microsoft
- **AWS Certified Solutions Architect - Associate** (2016)
Amazon Web Services.

EDUCATION

Bachelor of Science (B.Sc.) - Chemistry (1995 - Jun 1999)

Mumbai University

Graduate at NIIT (G-NIIT)

NIIT

ACHIEVEMENTS

- Successfully passed Deloitte SOC 2 audit with zero major findings, demonstrating commitment to security and compliance.
- Achieved 99.7% SLA compliance (~1,100 service requests/month), reflecting dedication to service excellence.
- Delivered 28% cost savings through resource utilization, showcasing ability to optimize infrastructure spending.
- Maintained 100% uptime with zero Sev-1/2 incidents for over a year, highlighting reliability and operational efficiency.
- Reduced MTTR by 7% through effective incident/problem management, improving system recovery times.
- Improved system uptime by implementing proactive monitoring and automated incident response.
- Efficient and scalable cloud automation and Cost Saving by 15 % in each quarter
Enhanced security posture by identifying and remediating critical vulnerabilities through regular VA & CA activities.
Streamlined update processes, reducing maintenance window duration and minimizing service disruptions.
- Observability & Monitoring
Advanced monitoring strategies
Real-time analytics and alerting
Proactive issue prevention using AI capabilities
- 200+ VM VMware to Azure migration, 30% TCO reduction, RTO 1hr/RPO 15min using ASR
Implemented SRE practices per Linux Foundation framework: defined SLO 99.95% + error budgets, reduced MTTR 75% using Azure Monitor

PROJECTS

Designed & Deployed Highly Available AWS Infrastructure

Architected and implemented a fault-tolerant, load-balanced web application environment on AWS using Amazon EC2, Application Load Balancer (ALB), Target Groups, VPC, and Health Checks.

Provisioned and configured 2 Amazon EC2 (t3.micro) instances across separate subnets to improve infrastructure resilience and eliminate single points of failure.

Configured an Application Load Balancer (ALB) with listener rules and target groups to intelligently distribute incoming HTTP traffic across multiple backend servers.

Implemented automated health monitoring and failover mechanisms, ensuring requests were routed only to healthy instances and maintaining uninterrupted service availability.

Achieved high availability, fault tolerance, and horizontal scalability, enabling the architecture to handle instance failures without impacting end-user experience.

Demonstrated real-world cloud architecture best practices, including load balancing, traffic management, redundancy, and infrastructure reliability.

Tech Stack: AWS EC2 | Application Load Balancer (ALB) | Target Groups | VPC | Subnets | Health Checks | HTTP Routing | Cloud Infrastructure

Cloud-Based Web Application Deployment on AWS EC2

Designed, deployed, and managed a cloud-hosted web application infrastructure using Amazon Web Services (AWS). Successfully provisioned a production-ready Linux server, configured a high-performance web server, implemented network security controls, and published a live website accessible via a public IP address.

Technical Stack

Category Technologies

Cloud Platform Amazon Web Services (AWS EC2)

Operating System Linux (Ubuntu/Amazon Linux)

Web Server Nginx

Key Responsibilities & Achievements

☁️ Cloud Infrastructure Provisioning

Provisioned and configured an AWS EC2 virtual machine instance optimized for web hosting.
Selected appropriate compute resources based on application requirements and scalability considerations.
Established secure remote access using SSH for server administration.

Web Server Deployment

Installed, configured, and managed Nginx as the web server.
Optimized server configuration for efficient content delivery and reliability.
Hosted and served static web content through a publicly accessible endpoint.

Network & Security Configuration

Configured AWS Security Groups to control inbound and outbound traffic.
Opened and validated HTTP/HTTPS access rules while maintaining secure server access.
Managed public IP routing and connectivity to ensure seamless application availability.

Linux System Administration

Performed server setup, file management, permission handling, and service monitoring through Linux command-line tools.
Managed system services and validated web server health using Linux administration best practices.
Troubleshot deployment and networking issues to ensure uninterrupted service delivery.

End-to-End Deployment

Successfully transformed a local web project into a live, internet-accessible application.
Verified deployment through browser-based testing and server-side monitoring.
Demonstrated complete deployment lifecycle from infrastructure provisioning to production access.

AWS Static Website Hosting with S3

AWS Cloud and Infrastructure as Code (IaC) project to automate the deployment of a static website using Amazon S3, Amazon CloudFront, and Terraform.

The goal was to understand how cloud infrastructure can be provisioned using code while ensuring scalability, performance, and high availability.

Project Workflow

- 1 Created an Amazon S3 bucket for static website hosting
- 2 Configured S3 to host static web content
- 3 Automated file upload to S3 using Terraform
- 4 Set up bucket policies for controlled public access
- 5 Deployed Amazon CloudFront as a CDN layer
- 6 Connected CloudFront distribution with S3 origin
- 7 Managed entire infrastructure using Terraform (IaC)
- 8 Validated global access and performance via CloudFront

🏆 Outcome

- 1 Successfully hosted a static website on AWS S3
- 2 Integrated CloudFront for global content delivery
- 3 Fully automated infrastructure using Terraform
- 4 Gained hands-on experience with real-world cloud architecture
- 5 Strengthened understanding of scalable deployment patterns
